

Helping fleet operators overcome the challenges of electrification

High upfront costs

As-a-service financing for vehicles and infrastructure

New technology risk

Battery replacement and performance guarantees

Uncertain operational costs

Power purchase agreements and optimisation software

Expensive mistakes

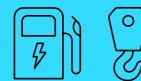

Future-proofed, time-tested plans

Analysis, advice and design

Financing discussions

Engineering, procurement and construction

Optimisation and operational support

Minimising risk
Maximising returns
Smoothing operations

Ramping up electrification

Second life battery applications to reduce cost and environmental impact

Data and insights

>75

electrification projects

c.1,000

electric buses, trucks, coaches and boats supported

14%*

cost saving over lifetime compared to diesel

99.9%

vehicle uptime
